For new users

AREA USER DOCUMENTATION

Start and use the tool

March 2022

WEB

This user manual is dedicated to guide you through the tools in order to help you take full advantage of its features.

First, enter the command below to get the project folder.

> git clone git@github.com:EpitechPromo2024/B-YEP-500-PAR-5-1-area-mihailo.pavlovic.git

To launch the tool, run the following two commands.
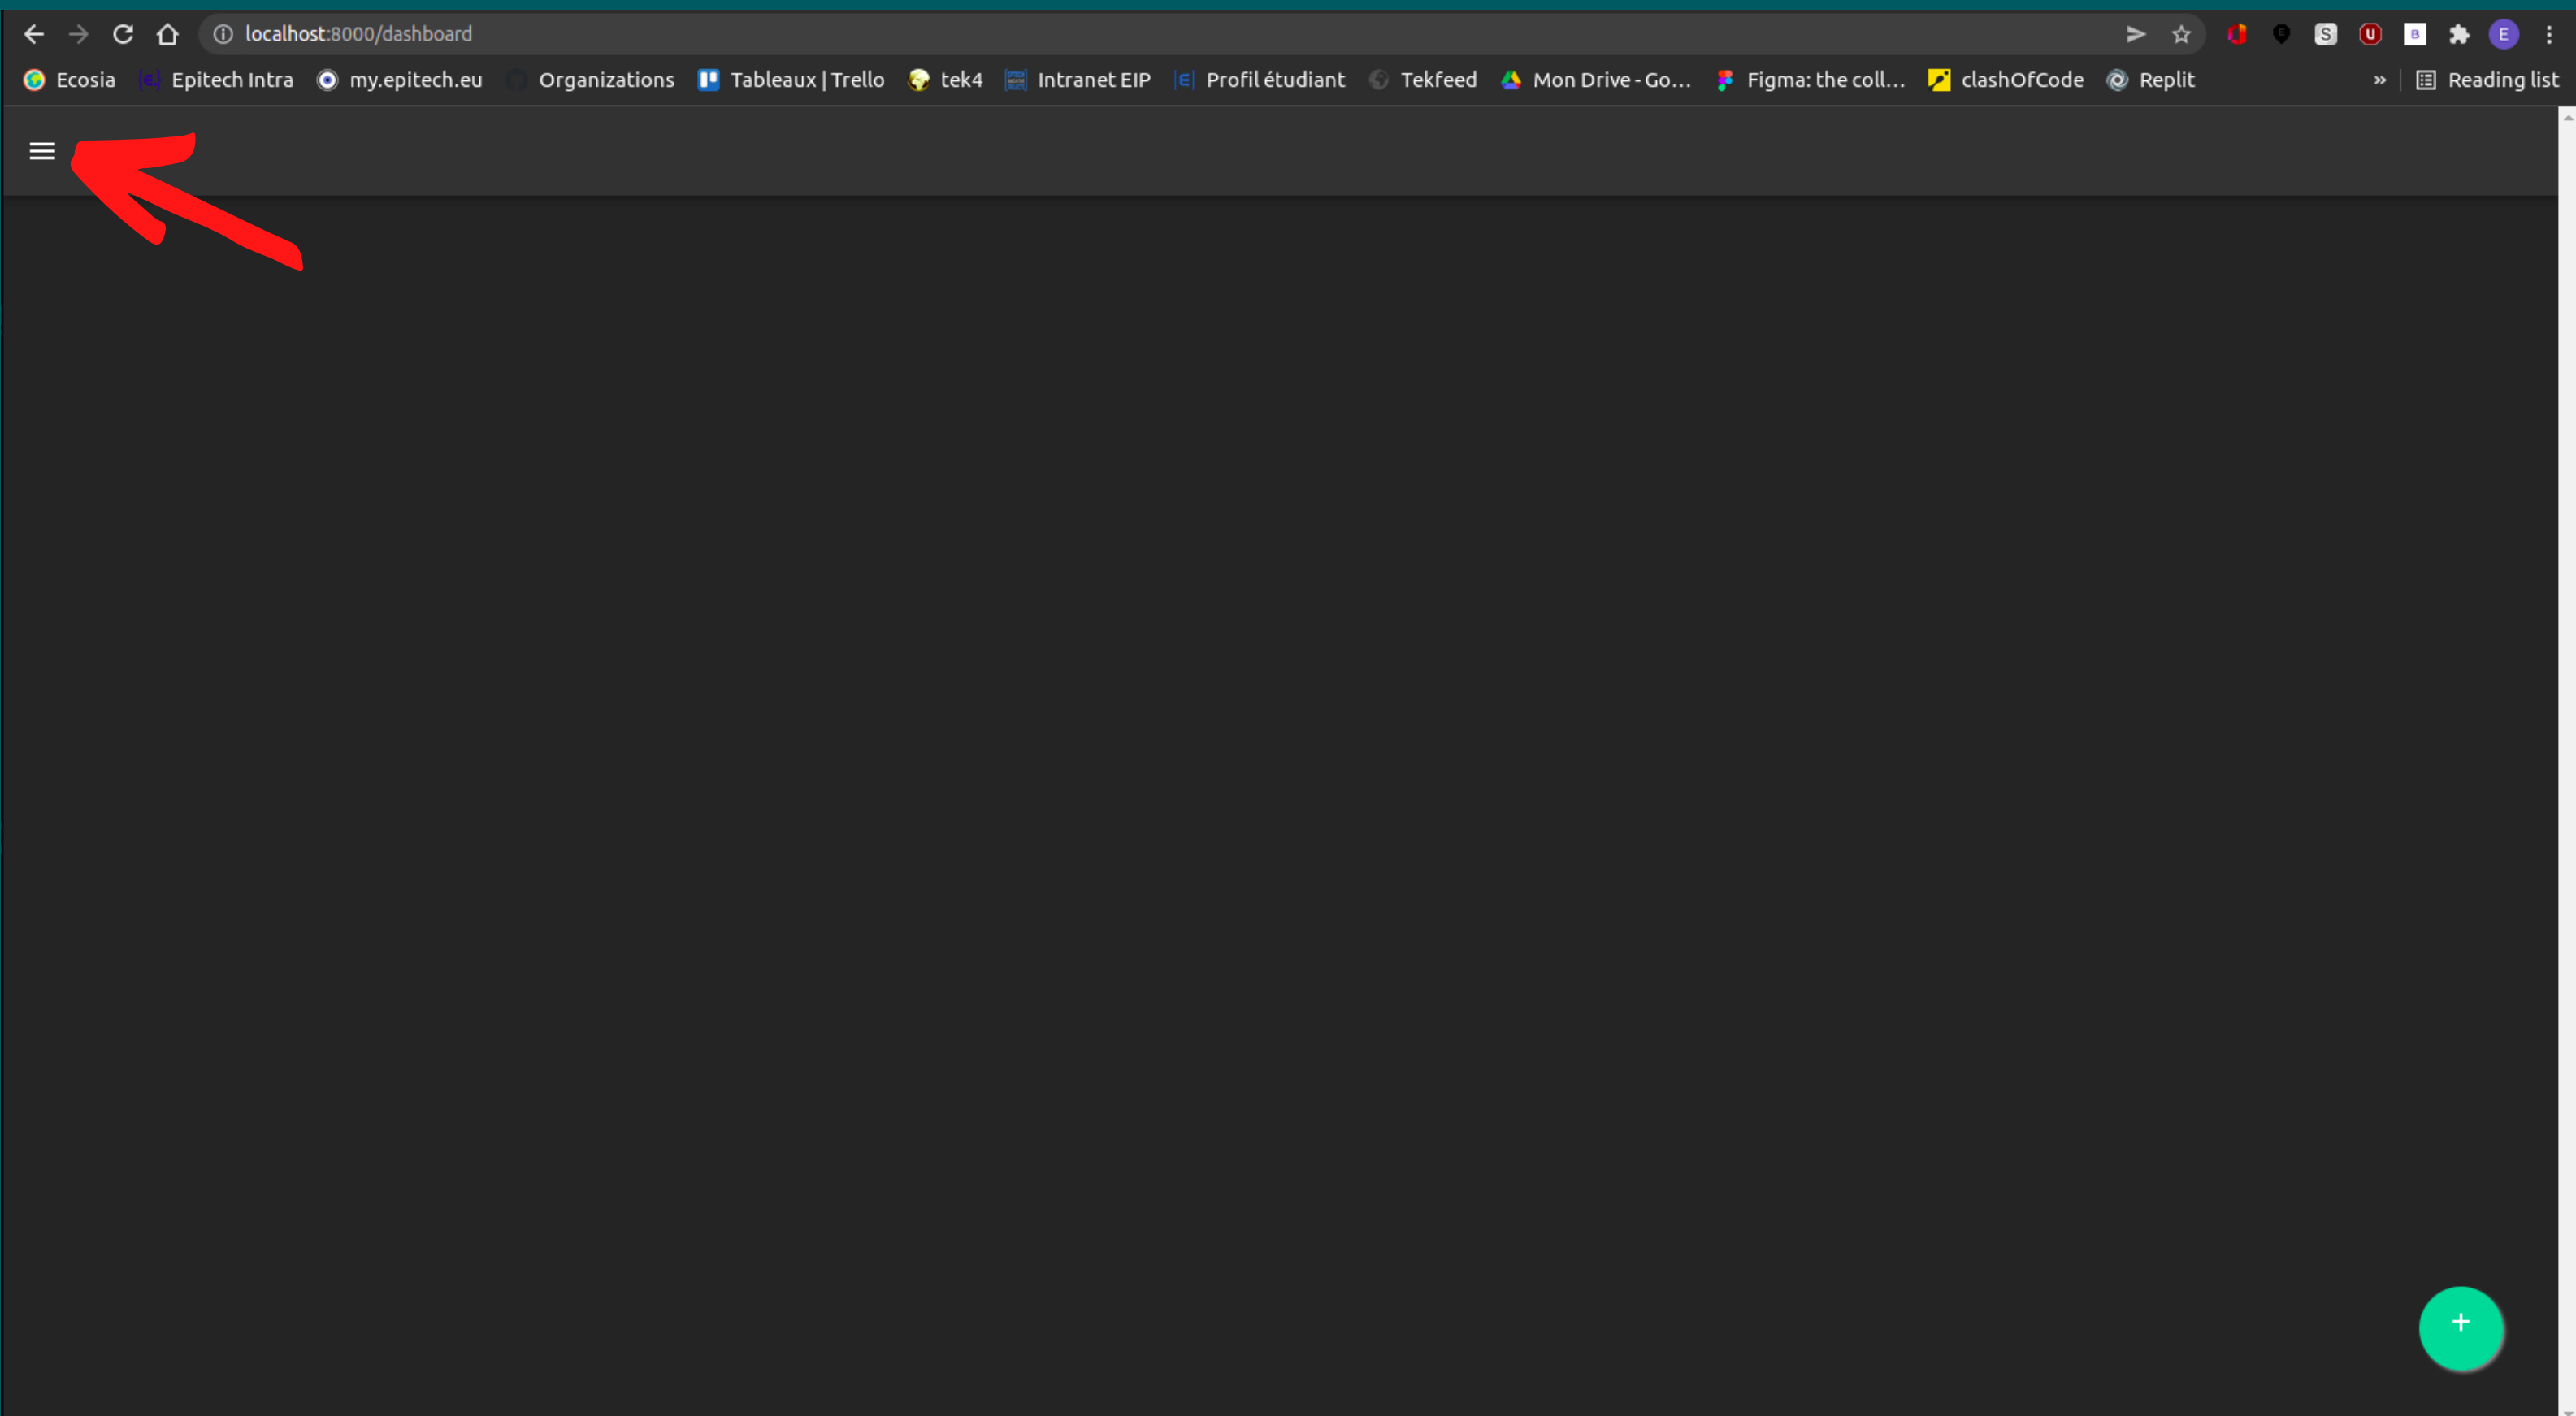

> cd B-YEP-500-PAR-5-1-area-mihailo.pavlovic

> docker-compose up --build

Once the commands are used, open this link on your favorite web browser http://localhost:8000/login, you should get this:
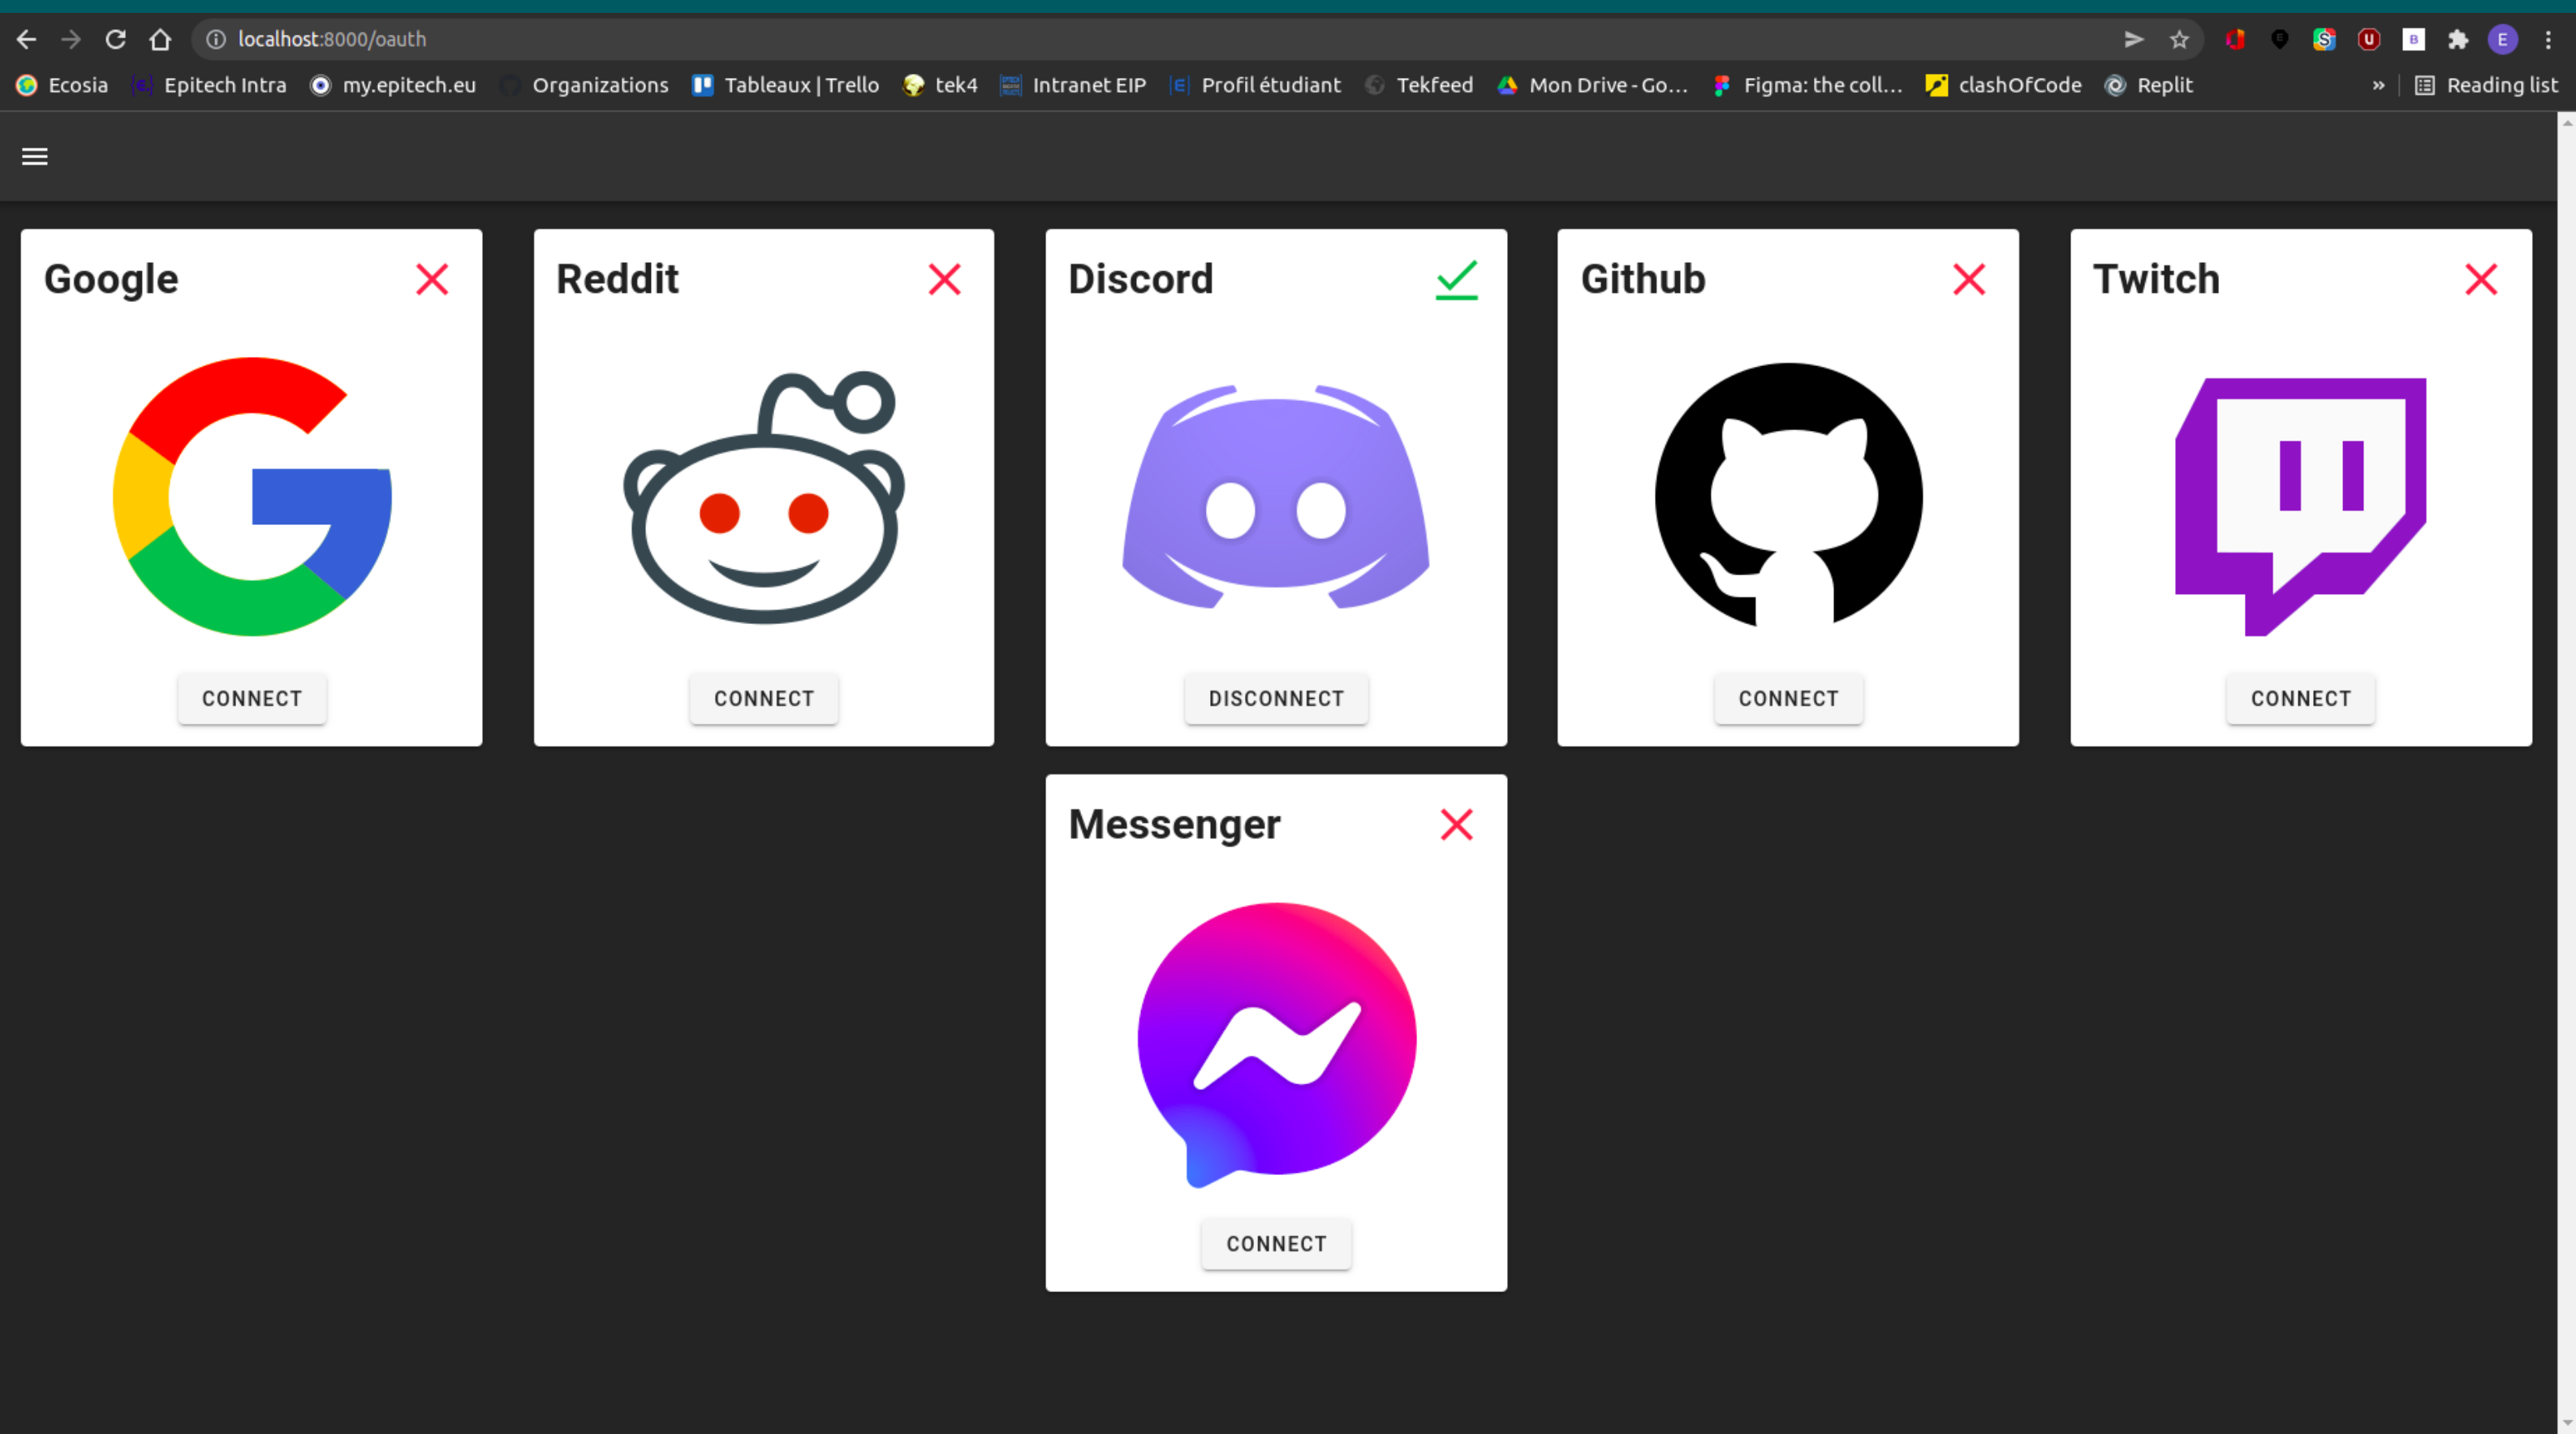

You can then log into with the "login" button if you have already created an account on on this website. If you don't have an accout, you can also create a new one using an email address and a password of your choice.
Then you will enter the Area tool:

The "+" circle button in green at the bottom of the screen allows you to create the area you want, and the icons at the top left of the screen show by the red arrow is the menu, it allow you to navigate between the Home and the Oauth page.

To create an area, you will first need to connect to the services you want to use in your area. The oauth page allows you to connect to these different services and this process is necessary for the proper functioning of the tool.

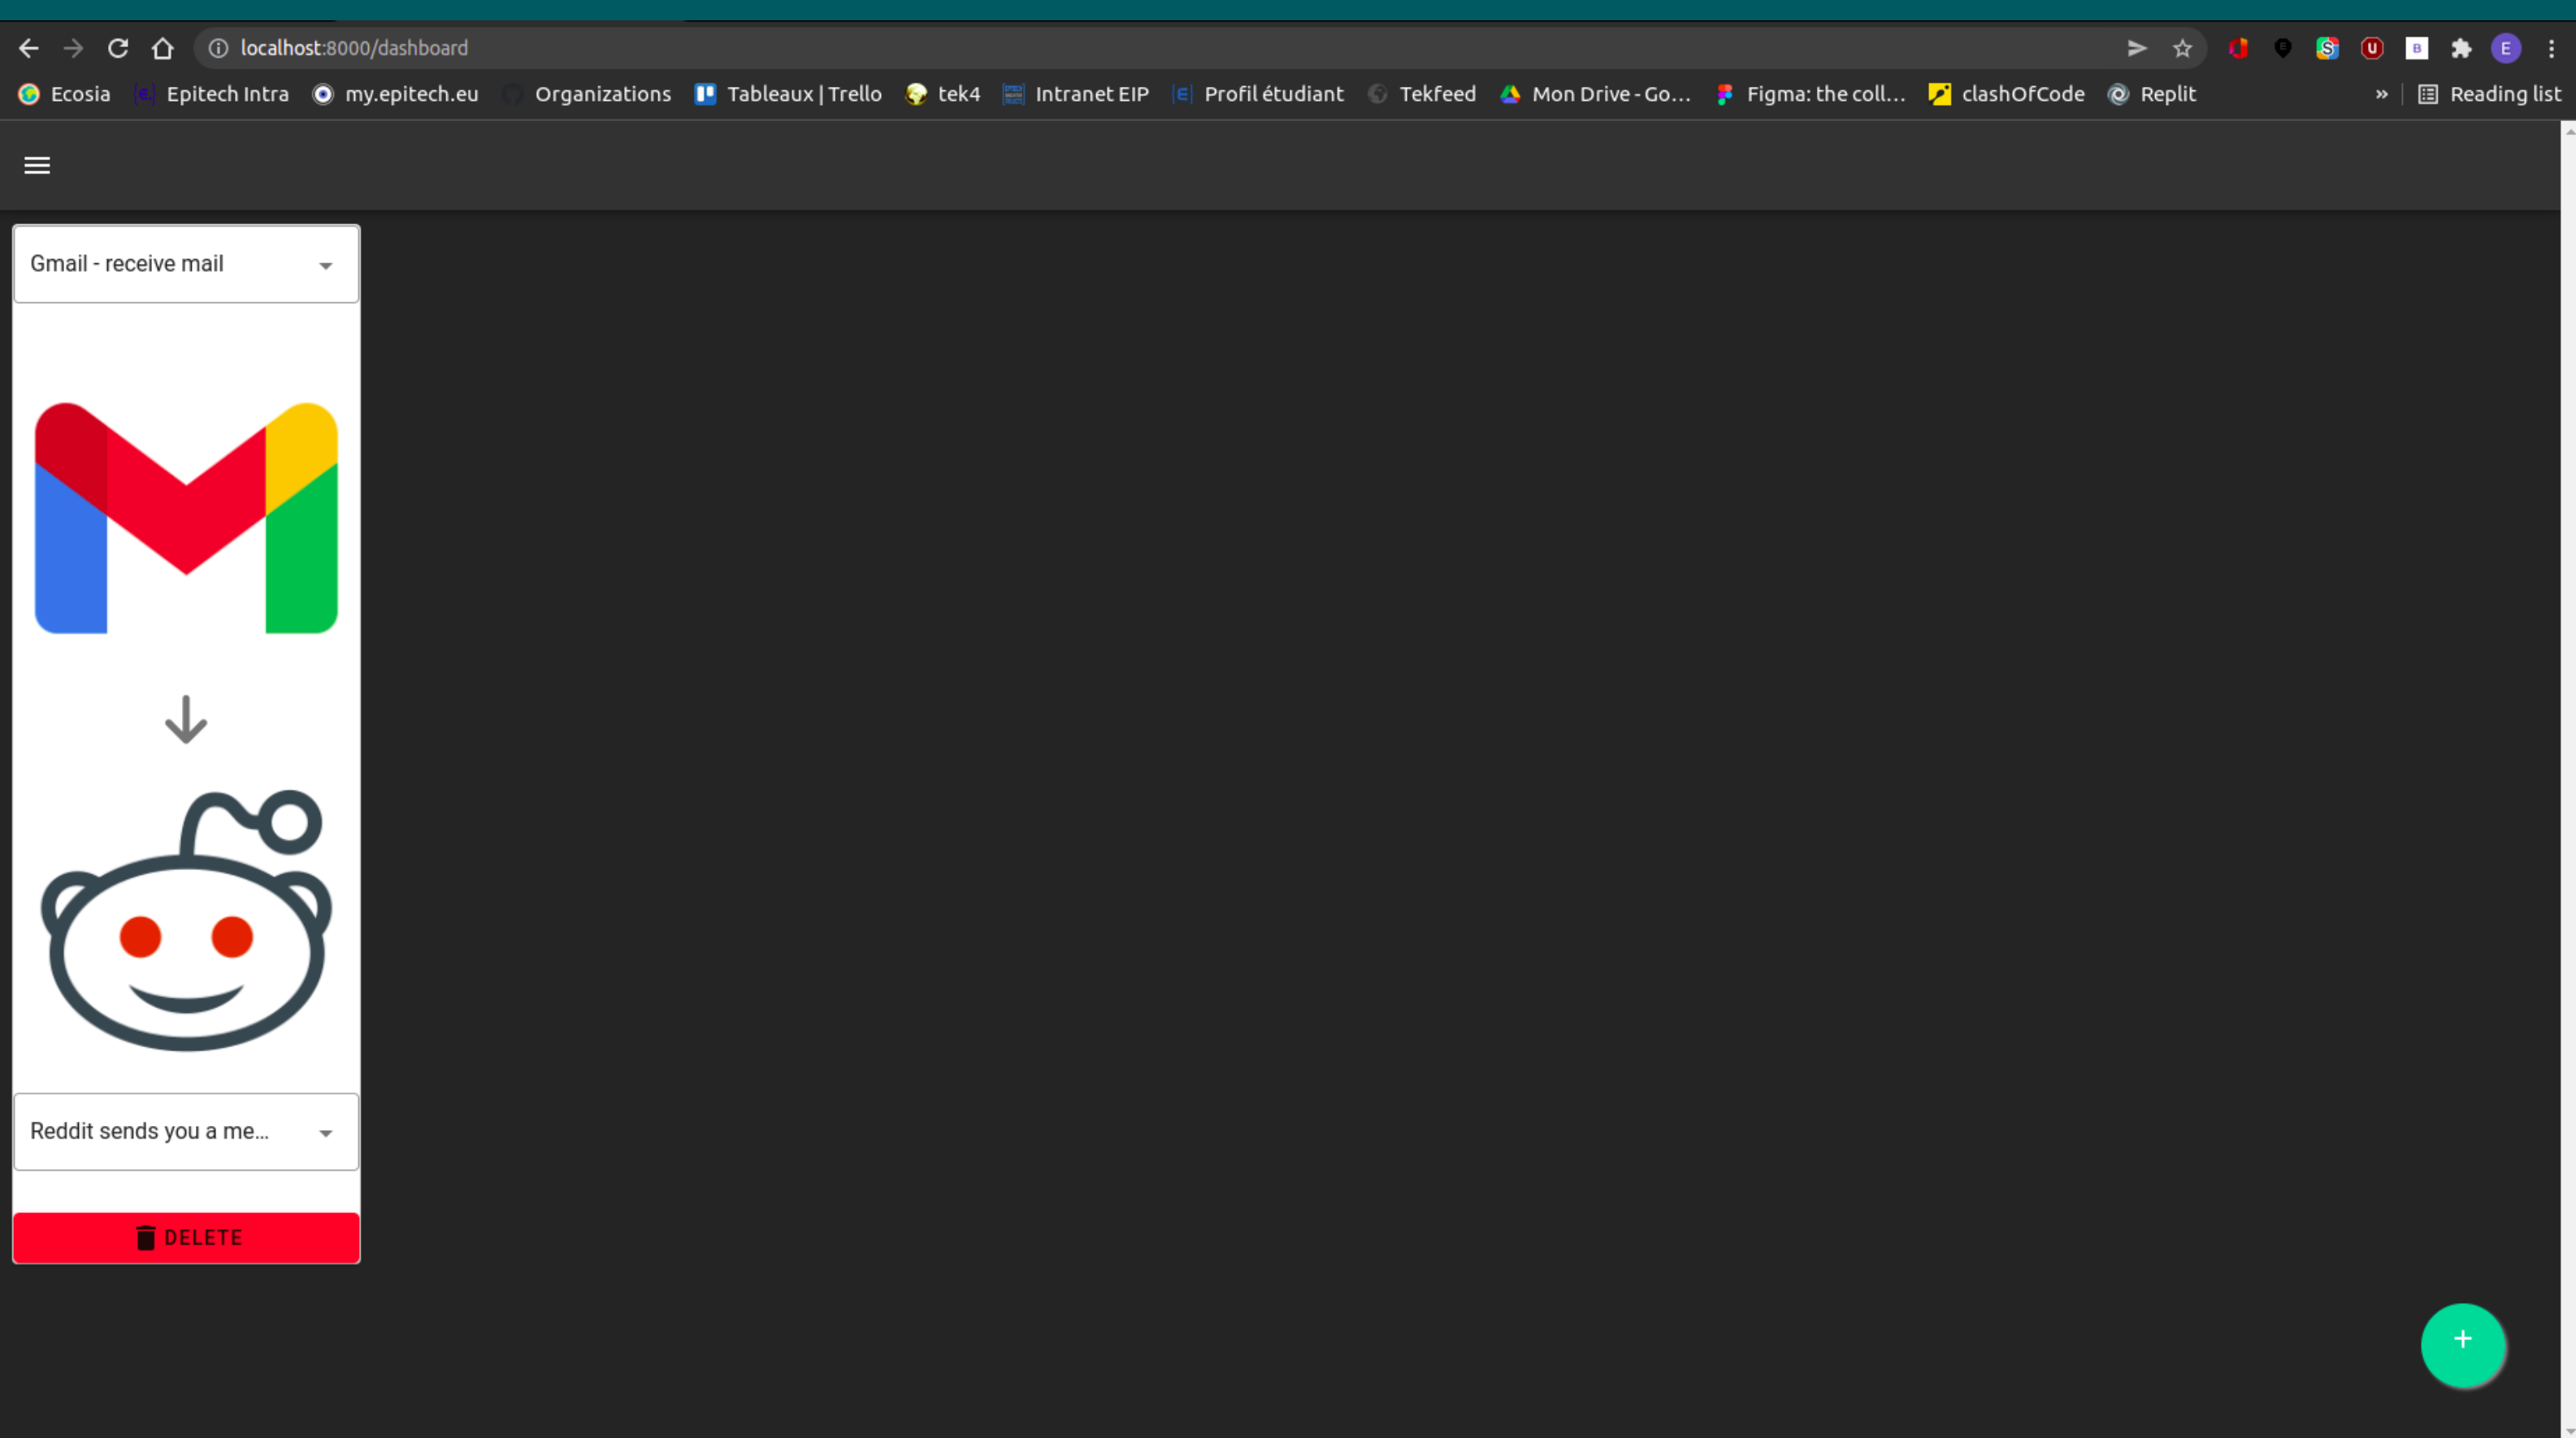

If you are not connected to a service, a red cross is displayed at the top right of it, conversely, if you are connected, a green symbol appears as you can see in the photo just above.

Area

An area is composed of an **action** and a **reaction**, the action watch if you have any news in the service you choosed every minute, and the reaction send you a notification for the news you just got in the action you choosed. For exemple in the case below, if you recieve a new mail on your gmail accout, reddit send you a private message as notification. This exemple work only if you are connected to your google and reddit account in the oauth page.

You can manage or delete your areas at every time ine the Home page.

MOBILE

Our app work on mobile too !

You will need to install flutter first, once it's done, you can launch the mobile version, connect your android phone to your pc and run the following commands !
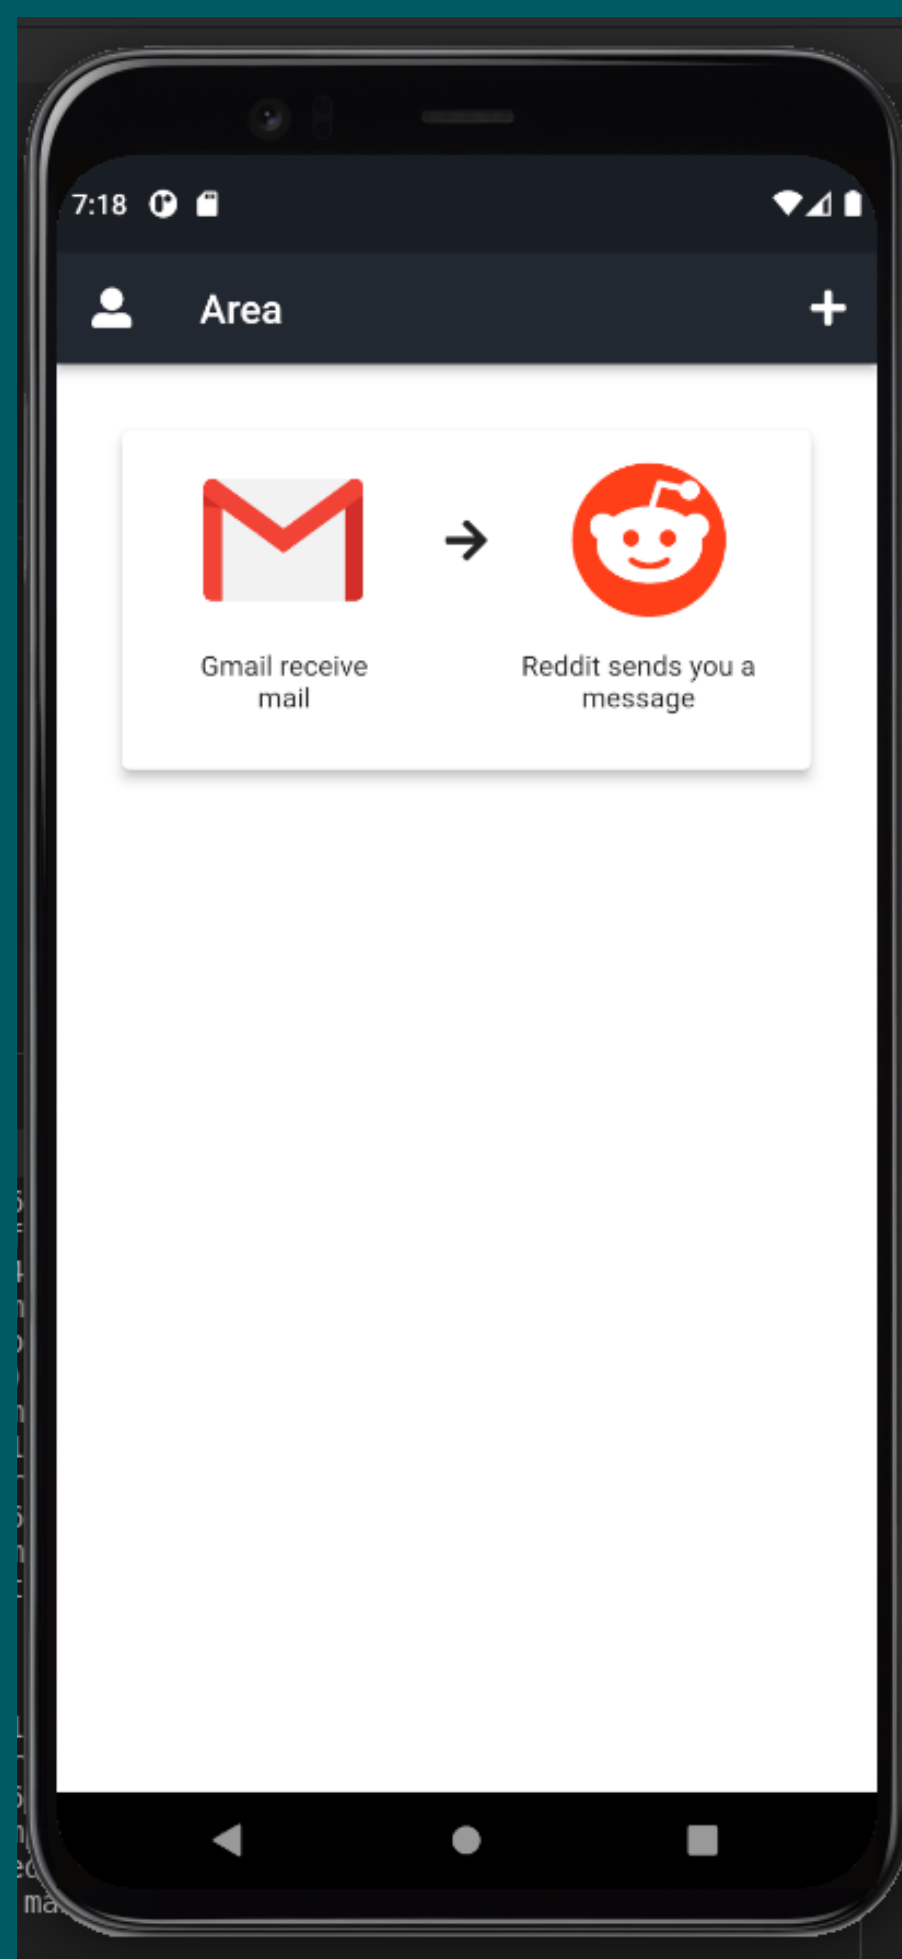

> docker-compose up --build

> cd mobile

> flutter run

Once the commands are used, you will se the app on your phone screen !

You can now like the web version, login to the app and create areas ! Enjoy !

Thank you for choosing our Area tool! We hope you enjoy it!
